

Innovation. Quality. Solutions.

Pyramin® WG

SELECTIVE HERBICIDE

ACTIVE INGREDIENT

650 g/kg chloridazon

FEATURES

- Unique active ingredient
- Broad weed spectrum
- Taken up by both weed roots and leaves
- Good crop safety

BACKGROUND

PYRAMIN has been in the market for many years and was developed for the control of annual broad-leaved weeds and various grasses in red beet, silver beet and fodder beet.

MODE OF ACTION

PYRAMIN Selective Herbicide is a member of the pyridazinone group of herbicides. PYRAMIN is a herbicide which inhibits photosynthesis at photo-system II. For weed resistance management PYRAMIN is a Group C herbicide.

PYRAMIN acts mainly through the roots of weeds which die a few days after they break through the ground. PYRAMIN remains effective for several weeks after application. No chemical residues remain in the soil after the crop has been harvested

THE DOSE

Depends on the soil characteristics.
Refer to table for further information

APPLICATION

Apply PYRAMIN the day of sowing or as soon as possible after planting, but before the crop emerges. If soil moisture is inadequate for proper beet germination, PYRAMIN will not give good weed control, in which case irrigate within 10 days.

Irrigation after application however, should not exceed 35 mm per week, particularly during cold weather conditions.

PYRAMIN should be applied in at least 110 to 220 litres of water per hectare.

RESTRAINT

DO NOT apply Pyramin to sandy soils with low organic matter as crop damage may result.

RE-ENTRY PERIOD

DO NOT enter treated areas for 10 days unless wearing cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day's use.

SUMMARY

- PYRAMIN has a unique active ingredient which results in absorption in both the roots and leaves of the weed.
- Broad spectrum herbicide with good crop safety levels.

Pyramin® WG

SELECTIVE HERBICIDE

THE PRODUCT

RATE				CRITICAL COMMENTS	
In the following table rates are given for dilute spraying. For concentrate spraying refer to the Application Section				For uses in this table: Apply by dilute or concentration spraying equipment. Apply the same amount of product to the target crop whether applying this product by dilute or concentrate spraying methods	
CROP	WEEDS CONTROLLED	STATE	RATE PER HECTARE		CRITICAL COMMENTS
			MEDIUM TO HEAVY SOILS	LIGHT SOILS	
Fodder beet, red beet, silver beet	Bitter cress, blackberry night-shade, black bindweed, capeweed, chamomile, charlock, chickweed, common sowthistle, cotula, deadnettle, docks, dwarf nettle, fat hen, field poppy, groundsel, marshmallow, mustard, pale persicaria, penny cress, persicaria, pig weed, potato weed, scarlet pimpernel, shepherds purse, sowthistle, speedwell, spurry, stagger weed, wild radish, winter grass	NSW, VIC, TAS, SA, WA ONLY	4.6-6.5kg	-	Apply at sowing or as soon as possible after planting, but before crop emerges
			-	3.5-4.5 kg	April to September sowing. Apply at sowing as above
			-	2.2 to 3.5kg	October to March sowing. Apply at sowing as above
		QLD ONLY	5.5-8kg	4.5-5.5kg	Apply at sowing or as soon as possible after planting, but before crop emerges.
Baby leaf spinach, Baby leaf beet/ chard		Vic and Tas only	4.5kg/ha	-	Apply after sowing of direct seeded crops, but before crop emergence.

DO NOT enter treated areas for 10 days unless wearing cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day's use.
