

HELLCAT®
HERBICIDE

KATANA®
250 WG HERBICIDE

HELLCAT contains 200 g/L glufosinate-ammonium, 3.6 g/L carfentrazone-ethyl
KATANA contains 250 g/kg flazasulfuron

PREMIUM TANK MIX

Testimonial from
Rob Sutherland
Viticulturalist
De Bortoli
Yarra Valley Estate, Victoria

De Bortoli's Yarra Valley Estate comprises 240 hectares of vines which are managed by viticulturist Rob Sutherland. Rob has been involved with the De Bortoli Wines family business since 2005.

Last season, on advice from his local E.E. Muir & Sons agronomists, Adrian Utter and Ella Kelly, Rob applied a tank mix of Hellcat Herbicide and Katana 250 WG Herbicide over part of the vineyard.

Hellcat and Katana are two new herbicides from AgNova Technologies. Hellcat is a broad spectrum, knockdown herbicide, consisting of a convenient co-formulation of glufosinate-ammonium and carfentrazone-ethyl. This combination of Group 10 and Group 14 actives is useful for resistance management and has a range of registered uses, including grapevines. Katana is a soil residual herbicide which provides a new mode of action in grapevines, and can also be used in citrus and olives.

Rob was very impressed with the level and longevity of weed control achieved from the Hellcat + Katana tank mix.

"From what I have seen with the level and length of weed control, it should allow me to cut out an extra herbicide application in the program, and prevent extra costs with hand weeding or slashing of particular weeds".

"The Hellcat Katana mix was really effective on both broadleaves and grasses".

"I'll definitely be using it in the vineyard next season".
